

Artificial turf sprouts from sports fields onto properties traditionally maintained by landscapers.

Synthetic turf sprouts on home lawns

Ever since the 1960s, the World's Synthetic Turf Association (WSTA) has been the leading organization of safe, durable and long-lasting artificial turf. WSTA's artificial turf is made from polypropylene fibers that are woven into a mesh and coated with a layer of sand. WSTA's artificial turf is made from polypropylene fibers that are woven into a mesh and coated with a layer of sand. WSTA's artificial turf is made from polypropylene fibers that are woven into a mesh and coated with a layer of sand.

But this past spring our special feature introduced a game-like synthetic turf that's designed to look like grass. This design does not require any maintenance. This design does not require any maintenance. This design does not require any maintenance.

By a company called *Artificial Turf*, that mimics the appearance of real grass. Current, many of these have been used to field the needs of the major professional sports leagues. It is the artificial turf that is used to field the needs of the major professional sports leagues.

Many more manufacturers produce artificial turf, many of which are not as good as the artificial turf that is used to field the needs of the major professional sports leagues.
